

## **Problem Statement 1:**

### **1. Attendance Defaulter Alert System**

#### **Problem Statement:**

Develop a software system that records student attendance, calculates attendance percentage, and automatically identifies students whose attendance is below the minimum required limit. The system should generate alerts for defaulters and display reports for faculty/admin.

#### **Required Modules:**

**Module 1 – Login Module**

**Module 2 – Student Management**

**Module 3 – Attendance Entry**

**Module 4 – Attendance Calculation**

**Module 5 – Defaulter Detection**

**Module 6 – Alert Module**

**Module 7 – Report Module**

**Module 8 – Dashboard (Optional)**

## **Problem Statement 2:**

### **2. Assignment Not Submission Alert System**

#### **Problem Statement**

Develop a software system that keeps record of assignments given to students and tracks whether students have submitted the assignment or not.

The system should automatically identify students who did not submit the assignment before the deadline and generate alert messages for them.

#### **Required Modules**

**Module 1 – Login Module**

**Module 2 – Student Management**

**Module 3 – Assignment Management**

**Module 4 – Submission Entry Module**

**Module 5 – Defaulter Detection Module**

**Module 6 – Alert Module**

**Module 7 – Report Module**

**Module 8 – Dashboard**

## **Problem Statement 3:**

### **3. College Event Planning and Execution System**

#### **Problem Statement:**

In colleges, organizing events such as seminars, workshops, hackathons, cultural programs, and sports activities requires proper planning and coordination.

Managing event details manually may lead to confusion, missed deadlines, and improper execution.

Develop a software system that helps to **plan, manage, and execute college events**, including event creation, task assignment, participant registration, schedule tracking, and report generation.

The system should help coordinators monitor event progress and ensure smooth execution.

#### **Expected Modules**

**Module 1 - Login Module**

**Module 2 - Event Planning Module**

**Module 3 - Task Assignment Module**

**Module 4 - Participant Registration Module**

**Module 5 - Event Schedule Module**

**Module 6 - Execution Tracking Module**

**Module 7 - Report Module**

**Module 8 - Alert / Notification Module**

## **Problem Statement 4:**

### **4. Fee Defaulter Alert System**

#### **Problem Statement**

In colleges, tracking student fee payment manually is difficult and time-consuming.

Sometimes students forget to pay fees before the deadline, which creates problems for administration.

Develop a software system that records student fee details, tracks payment status, and automatically generates alerts for students whose fees are pending or overdue.

The system should display **paid / unpaid / partially paid students** and generate **defaulter list**.

#### **Expected Modules**

**Module 1 - Login Module**

**Module 2 - Student Management Module**

**Module 3 - Fee Structure Module**

**Module 4 - Fee Payment Module**

**Module 5 - Defaulter Detection Module**

**Module 6 - Alert Module**

**Module 7 - Report Module**

**Module 8 - Dashboard Module**

## **Problem Statement 5:**

### **5. Internship and Placement Tracking System**

#### **Problem Statement:**

Colleges need an efficient system to maintain records of student internships and placements. Manual record keeping makes it difficult to track company details, student selection status, and internship progress.

Develop a **web-based Internship and Placement Tracking System** that helps the department manage student internship and placement information, company details, and generate reports.

#### **Required Modules**

**Module 1 - Admin Module**

**Module 2 - Student Module**

**Module 3 - Company Module**

**Module 4 - Internship Module**

**Module 5 - Placement Module**

**Module 6 - Search and Filter Module**

**Module 7 - Report Module**

**Module 8 - Admin Dashboard Module**

**Module 9 - Student Dashboard Features (Optional)**
